

Important leaflets

Please take some **leaflets** to share and read. Make sure that you have the leaflet with the instructions if you buy a plant. This is explained below at the front of the box.

Optional bucket \$1. Stand \$2

This enables the self watering wick system to work well. You need a stand that matches the pot size like shown in the examples. However, you may only need the UV resistant bucket by itself because if you place a couple of pots in it, the pots can remain suspended at the correct height. A number of combinations and sizes can be placed into the bucket to achieve this. For example, three 70 mm pots, a 70 mm and 95 mm pot, and four 50 mm pots that the Venus Fly Traps are potted in. Two 70 mm pots can also be suspended in the bucket if you push a block of polystyrene between them.

For the Venus Fly Traps in 50 mm pots, you need to use the bucket with a small hole in the side. Don't use a bucket with the hole for the larger pots. You can put an extra plant or two in the bucket beside a Venus Fly Trap because extra pots can also rest near the edge of the yellow stand. You need to make sure that the wicks hang down into the water and extend to the bottom of the flower bucket.

I can also provide larger buckets and special trays to stand a larger number of pots in to enable self watering. Please see more information at advantagein.com/cp/

Other varieties

I also sell many other varieties not displayed here at my home in Tolga. I prefer you let me know first if possible.

Prices, if not marked otherwise

Please note that carnivorous plants may be purchased for lower prices from some other growers. However, they do not contain the wick feature which is a huge advantage for the customer as it saves you time and means that the plant will be much more likely to live and thrive for a very long time. Installing the wick is an extra cost for me. However, I believe it is worth it. Also, as an extra bonus I offer people a free bare rooted carnivorous plant if their plant does not thrive. This could be planted back into your self watering pot to replace your original plant. That way you will be guaranteed to always have a plant.

I can negotiate lower prices for people with financial difficulty or for those that help me with the projects explained on the papers. Prices are lower for people that resell my plants.

Sarracenia in 70 mm pot: \$12.00 (small/medium) \$15.00 (large)
Sarracenia in 95 mm pot: \$21.00 (small/medium) \$24.00 (large)
Sarracenia in 105 mm pot: \$23.00 (small/medium) \$27.00 (large)
Sarracenia in 135 mm pot: \$28.00 (small/medium) \$35.00 (large)
Venus Fly Traps in 50 mm pot: \$9.00 (small/medium) \$12.00 (large)
Venus Fly Traps in white capillary cloth pots: \$14.00 (small/medium) \$18.00 (large)
Sundews (Drosera) in 70 pots: \$8.00 (small/medium) \$10.00 (large)
Sundews (Drosera) in 95 pots: \$10.00 (small/medium) \$12.00 (large)
Nepenthes in 70 mm pot: \$12.00 (small/medium) \$15.00 (large)
Nepenthes in 90 mm square pot or green 135mm round pot : \$17.00 (small/medium) \$23.00 (large)
Nepenthes in 140 mm (approx) pots: \$27.00 (medium) \$35.00 (large)
Flower bucket and stand: \$3.00
Flower bucket by itself: \$1.00
